Course Guides

The Course Guides screen displays a list of all guide files availabl

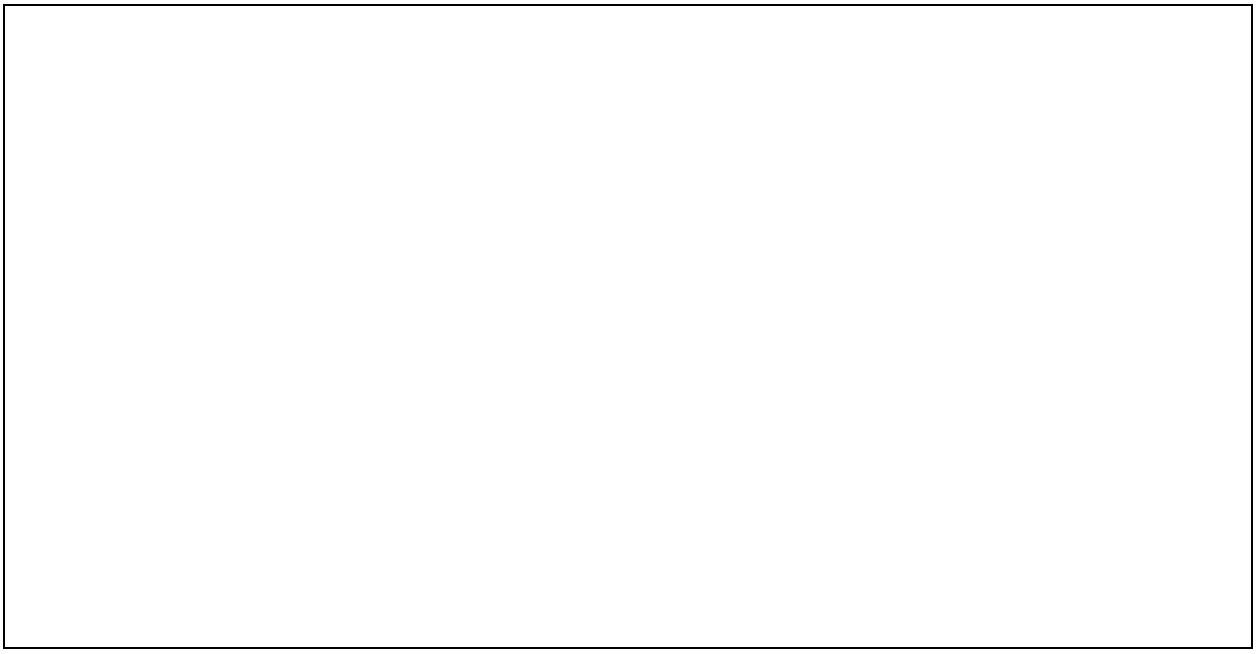
Class Message Board

The optional Message Board is a forum where students post asynchronous answers to questions and comments to discussion items. For example, an instructor would access the Message Board to pose a question, and then the students would access it to respond and submit answers. The interaction is not live or real time.

You can access the Message Board at any time to review the level of participation for each student and the quality of th

Debugging Mode allows you to show full detailed error messages, or more friendly error messages depending on the amount of security needed. If an error occurs, you can toggle this debug mode on and review the error in detail, then toggle it off so that your students are not seeing specific server related details.

Languages



Multi-Language Support
The multi-language facility allows you to choose a default language for on-screen text appearing in the Student Module. You can add new languages and input the text values for all terminology for those languages. This affects the Student Module text only and does not translate to course materials, only the FlexTraining structure. If you plan on having multiple languages, your course material should be built 72 581tesired languages.
With2 581language option, students will have the ability to choose 581language for viewing 58ir courses. To enable 581multi-language support, select ng str
